Socially Responsible Investing (SRI)

Growth Strategy

SEPTEMBER 2021

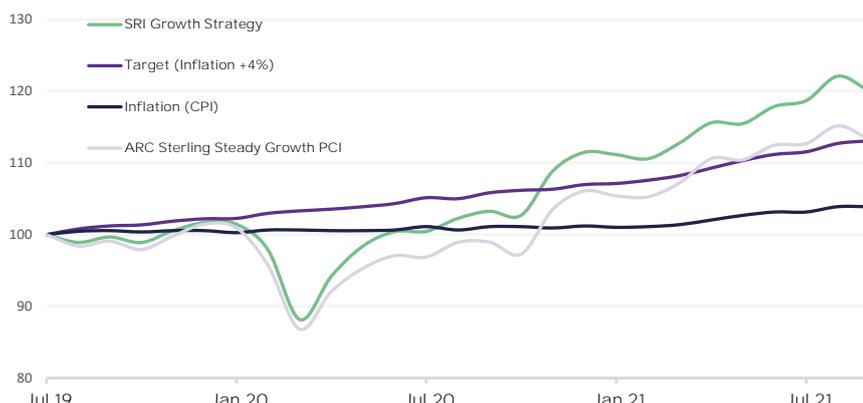

Overview

The Psigma SRI Growth Strategy invests in a diverse range of asset classes and investments that adhere to the Psigma SRI framework. The strategy uses a number of qualitative and quantitative inputs to decide on the asset allocation and holds underlying investments that aim to provide a societal benefit. The Growth Strategy aims to deliver equity like returns with significantly reduced volatility and a decreased risk of capital loss.

Investment Objective

This strategy aims to preserve your wealth above the rate of inflation. Given this target, it also attempts to generate growth returns through diversified investments, in line with our SRI framework, with a maximum equity weighting of 75%.

Net Performance Chart

ARC data is confirmed until June 2021. From July 2021 to September 2021 the data is based on estimates from ARC and are subject to change.

Performance

CUMULATIVE NET PERFORMANCE

	1 Month	3 Months	6 Months	1 Year	ITD*
Strategy	-1.75%	1.77%	6.37%	16.19%	19.97%
Inflation	0.00%	0.72%	2.47%	2.75%	3.89%

Past performance is not a guide to future performance.

Inflation Source: CPI from the Office for National Statistics. Crown Copyright material is reproduced with the permission of the Office of Public Sector Information (OPSI). Reproduced under the terms of the Click-Use License.

Due to the delay in the announcement of the monthly CPI data, the CPI figure for the current month has been assumed to be flat and the CPI target has been calculated using the previous month's figure. The correct number of months for the performance period shown is included in the compound CPI target performance calculation.

Annual volatility statistics are reported on a rolling 12 month basis. Annual Volatility is a measure of the price variation of an investment over time. It is a contributor to defining the risk characteristics of a specific asset class or a portfolio of diverse investments.

*Product costs are external costs levied by third party fund managers for providing collective investment schemes for your investment portfolio and include: fund expenses incurred by third party fund managers, transaction costs as a result of acquisition or sale of assets and incidental costs, which include third party performance fees.

*Inception to Date. Performance is measured from Inception Date, which is 31/07/2019.

Unless otherwise stated, all data is from Interactive Data as at 30/09/2021.

All performance figures shown on this factsheet are net of underlying fund charges and net of Psigma Investment Management fees as outlined in the MPS fee schedule. Fees charged by any Financial Adviser are not taken into account.

*SRI FRAMEWORK

The SRI framework consists of the following components when assessing underlying holdings: Environmental, Social and Governance integration, Sustainability, Impact and Engagement. Using this framework supports the construction of a strategy that is exposed to our desired investment themes: Education, Clean Energy, Healthcare, Wellbeing, Innovation and Resource Efficiency. The SRI framework places an emphasis on positive inclusion, which naturally leads to negative exclusions.

STRATEGY CHARACTERISTICS

Launched	July 2019

ASSET ALLOCATION

Market View

There was a pause for breath in September, as global markets hit somewhat of a bump in the road. As is the norm in today's world, concerns around COVID-19 remain with investors wondering what the winter months hold in the western world. Economically, there has been a moderating of global growth and concerns have been compounded by ever increasing concerns around supply chain disruptions. This has had the effect of pushing up input costs, which in turn is impacting companies around the world and could fuel stickier inflation than many have anticipated. Central banks are also heavily debating their own policies and there are signs that ultra-loose policy may be coming to an end. Investors have also become more concerned about the political gridlock in the US, where work is needed on a resolution to increase the debt ceiling – if they don't, the US could default on their obligations. To add to investor angst, there is also much concern aimed at China where China's property sector has come under pressure, following the much-publicised issues of the hugely indebted China Evergrande.

Returns in global developed markets were negative over the period. Returns were also negative for US, UK, and European equity markets. However, the one bright spot in the month was Japan, where having lagged for most of the year, returns were positive and strongly outperformed. Emerging markets and those in Asia fell broadly in line with those in the developed world. Looking at the shape of global markets, a rise in bond yields has put pressure back on the "growth" areas of the market and this style underperformed in both developed and emerging markets. This means "value" is firmly back ahead year-to-date. The best performing sector on a global basis was energy, given the dynamics currently going on in the energy market. The banking sector also outperformed, but to a far lesser extent. The worst hit sectors were basic materials, utilities, and telecommunications.

Important information: This document is prepared for general circulation and is intended to provide information only. The information contained within this document has been obtained from industry sources that we believe to be reliable and accurate at the time of writing. It is not intended to be construed as a solicitation for the sale of any particular investment nor as investment advice and does not have regard to the specific investment objectives, financial situation, capacity for loss, and particular needs of any person to whom it is presented. The investments contained in this document may not be suitable for all investors. Prospective investors should consider carefully whether any of the investments contained in this document are suitable for them in light of their circumstances and financial resources.

Investment risk:

- The value of investments and the income from them can fall as well as rise. An investor may not get back the amount of money that he/she invests. Past performance is not a guide to future performance.
- Foreign currency denominated investments are subject to fluctuations in exchange rates that could have a positive or adverse effect on the value of, and income from, the investment.
- Investors should consult their professional advisers on the possible tax and other consequences of their holding any of the investments contained in this publication.

TOP FIVE HOLDINGS

FUND	ALLOCATION
Royal London Sustainable Leaders	7.50%
Aberdeen Standard UK Ethical Fund	7.50%
BMO Responsible Income 2 INC	6.75%
TwentyFour Asset Backed Income	5.50%
UBAM Positive Impact Emerging Equity	5.25%

Within the fixed income universe, there was an acceleration higher (prices fell) in core government bond yields. In the UK, the ten-year bond saw a marked shift higher towards the 1% mark. Bond markets look to have begun to price in a retraction of the ultra-loose monetary policies. Both the US and UK central banks have seemed more hawkish of late, with the former hinting at tapering of asset purchases later this year and the latter going as far as hinting at a potential rate hike before the close of 2021. The negative price action in government bond yields spilled over into the more interest rate sensitive areas of investment grade, which also finished with a negative return. High yield was better behaved, given it has less interest rate sensitivity, but there was a little bit of spread widening. Emerging market debt has also been a little more challenged, given the ongoing ructions in China around China Evergrande and the property sector. Commodities provided a good source of return, with a particularly sharp increase in energy prices due to shortages in the wholesale gas market.

Portfolio Activity

We have not made any trades this month. Our policy remains one of patience, trying to find attractive long-term opportunities that are thrown up by volatility. We believe that the strategy is at present adequately positioned, with an appropriate mix of long-term value and short-term dependability.
